C	Base Extrusion	1
D	Base Seat Extrusions	2
E	End Caps	8
F	Cross Members	2

* This dock bench is designed to be a free standing unit. In most cases the consumer will want to securely fasten this bench to their dock. This will aid in added security, storm protection, and added stability. If possible, you will want to fasten the bench by using at least four (4) 3/8" through bolts or lag screws. This should be done at the outermost frame rails. Be sure the area you are mounting to is strong enough to properly hold your bench.
